

RPA for Data Entry Automation – Cut Costs by 70%

JULY 2, 2020 AMRITA JASWAL

Robotic Process Automation is a novelty that has been creating a buzz in the B2B world, for many reasons but one: The advent of RPA bots has empowered enterprises and **knowledge workers** to automate and offload monotonous and repetitive tasks.

Although, RPA bots can be integrated with the advanced technologies of the automation sphere, but at its core- **Robotic Automation is a tool to automate and streamline routine business processes.**

Having said that, let’s understand the application of RPA for data entry automation and how this automation technology helps you cut data entry costs by up to 70%.

But first, let’s clear the clouds surrounding a subtle key term: **Data entry automation.**

What is Data entry automation?

‘Data entry automation, in layman terms, refers to a group of software products exercised to optimize data insertion processes.’
